

Touring the new building

FRIB.MSU.EDU NSCL.MSU.EDU

FRIB

RESERVING YOUR TOUR

- FRIB new building tours include areas that may still be under construction. These tours are free and typically last 45 minutes, but can be shortened or lengthened somewhat.
- Visitors must be over 16 years of age.
- Tours are offered by appointment - contact Outreach Coordinator Zach Constan (517-908-7363, visits@nscl.msu.edu) to ask about scheduling your tour.
- When scheduling, please provide your group/organization name, type of audience (adults, students, etc.), contact person, email address, and number of visitors (an accurate estimate).
- While planning your visit, you might also consider visiting other MSU attractions - contact the MSU Tour Coordinators for assistance at tour.msu.edu.

BEFORE COMING/SAFETY ISSUES

- Visit the Tour website (<http://www.nscl.msu.edu/public/tour>) for important information and linked files, including the following forms:
 - The Minor Permission form that must be signed by the adult responsible for any guests under 18 on the day of the visit.
 - The Non-Public Tour Certification form that must be provided by the group leader on the day of the visit.
- The tour route is handicap-accessible and safe for guests with medical implants.
- Visitors must wear long pants/skirts, closed-toe shoes and the Personal Protective Equipment provided: vest, hard hat, and safety glasses.
- Photography is not allowed while touring the research space. However, there is a "photo wall" if you want to take a group picture!
- Guides perform a safety survey before every tour to ensure that visitors will receive no excess radiation exposure (beyond the normal background) while in the vaults.
- If the number in your group changes significantly from your original estimate, email Zach (visits@nscl.msu.edu) at least 72 hours before your tour.
- Use the directions to the laboratory (<http://www.nscl.msu.edu/about/contact.html>) to find parking and the lab entrance. Visitors often become lost on campus or can't find the correct door to enter the building.
- Read about nuclear science beforehand on our website (<http://www.nscl.msu.edu/public/tour/primer.html>) if you or your group want to know more before the tour.

WHAT TO EXPECT ON YOUR TOUR

- When you arrive in our lobby, tell the receptionist you are here for a tour and give the name of your contact. That person will meet you in the lobby and escort you into the laboratory.
- Your tour guide will want to know the level of physics your group understands and whether you have any time limitations in case the tour runs over. Remember, a typical tour lasts 90 minutes, so plan accordingly.
- If your group has more than 15 people, it will likely be broken up into smaller groups of up to 15 for the tour.
- This is a walking tour; visitors will be on their feet for the duration.
- If your tour visits the linear accelerator tunnel, your route will include 56 stairs down and up. Accommodations can be made for persons with disabilities.
- FRIB is a working laboratory. On the day of your tour, some areas may be inaccessible.
- Your group may be joined with another one that requested a tour in the same time period.
- In case of alarm, there will be lights and an announcement - evacuate to the nearest safe exit.
- Always follow the directions of your tour guide.
